

Jung-Kun Lee is William Kepler Whiteford Professor in the department of mechanical engineering and materials science at the University of Pittsburgh. He is a materials scientist with a specialty in functional materials for energy and electronic applications. His research interests are placed on 1) nanoscale material design for energy application, 2) electric, optical and magnetic properties of materials, 3) advanced processing and characterization of ceramic materials, 4) corrosion behavior of structural materials for nuclear energy application. Before he joined Pitt in 2007, he worked for the Los Alamos National Laboratory (LANL) as a technical staff member and a postdoctoral fellow. He received his doctorate in materials science and engineering from Seoul National University. He was an NSF Career Awardee and a LANL Director's Postdoctoral Fellow.
